Dear Commissioner Martin;

Docket 07-52, In the Matter of Broadband Industry Practices

Big telecom companies want to twist how the internet works. They want to set up priority service for a fee and second class service for the rest of us. s

Currently FCC rules require equality on the Internet. Delays, when they occur, affect all communication equally. When it is fast, everyone benefits.

Now the big telecom companies want to change the system so that they can charge for priority service.

This is unfair and unnecessary, and it would pander to corporate profit at public expense and will discourage Internet development in the public sector.

The FCC should keep the rules that have worked so well up till now.

Sincerely,

james oshea

Docket # 07-52

Johnhall802@aol.com wrote on 6/29/2007 9:12:18 PM :

Commissioner Robert McDowell :

Please issue a public statement in support of new competition and "open access" on our public airwaves. Our airwaves need to be protected from corporations like AT&T, Verizon, and Comcast that would stifle the national wireless market. Thank You in advance for your support!

First, ensure new competition. Big phone and cable companies who have spent years laying wires in the ground have every incentive to stifle the growth of a competitive high-speed wireless market. Therefore, if America wants to bring high-speed wireless Internet to every community, the FCC needs to ensure that a significant portion of the newly available airwaves go to new market competitors. Such rules prohibiting incumbents from stifling competition and innovation in the marketplace have been used in the past
<<http://wireless.fcc.gov/auctions/08/releases/r&odbs.pdf>> , and numerous approaches can be used to achieve this goal.

Second, ensure "open networks." [Also called "open access."] The FCC must set the terms of the auction so that whoever wins is prohibited from stifling innovation. For instance, wireless Internet providers must not be allowed to play gatekeeper over which websites their customers can access online—a power that phone companies exert right now to prevent handheld wireless customers from accessing Internet-based phone service
<<http://www.moveon.org/r?r=2658&id=10646-7820883-XO8uGY&t=2>> . Wireless Net Neutrality will let the market decide which web-based services thrive instead of self-interested gatekeepers.

Also part of "open networks," the auction winners must not be allowed to blacklist new technology from entering the market. Companies must give consumers the right to attach any safe device to their own devices—the equivalent of the FCC's landmark 1968 Carterfone <<http://www.timwu.org/log/archives/134>> decision, mandating that phone companies let customers attach an answering machine to their landline phone. (Indeed, this "right to attach" paved the way for the dial-up modem, which sparked the Internet revolution.)2
